摘要

本研究以现实学分析的视角, 对 2014 至 2024 年间的 6 次典型异常犯罪案例进行了重新审视, 发现这些犯罪者在作案过程中对现实学效应有意或无意的运用, 并利用一系列模拟实验加以实证, 为这些案例的复杂现实学背景进行了建模。本研究为从现实学角度防范异常影响提供参考, 并给出了异常犯罪调查的新方向。

Abstract

Holontological analysis methods have received great attentions in researches of anomalous crimes. Here, we reviewed 6 typical anomalous crime cases between 2014 and 2024 from a holontological perspective, revealing the intentional or unintentional exploitation of holontological effects by the perpetrators during their crimes. Through a series of simulation experiments, we provide empirical evidence and construct models for the complicated holontological backgrounds of these cases. This study provides a reference of preventing anomalous effects from a holontological standpoint and suggests new directions for the investigations of anomalous crimes.

Keywords holontology; anomalous crime
